**LineBreak**

LineBreak[n] is output between the \(n\)th and \((n+1)\)th lines in a multiline printed expression.

Redefining Format[LineBreak[n_]] changes the way spaces are printed between lines. Setting Format[LineBreak[_]] = "" specifies that a zero-size object is to be used between lines, and causes successive lines to be printed with no intervening blank lines. Additional blank lines can be inserted by setting Format[LineBreak[_]] to be an object that is several lines high. See page 588. See also: Continuation, StringBreak, Indent.
